2 Useful LaTeX commands

This sentence should be italicized.

This sentence should be underlined.

This sentence should be bold.

The word LaTeX should now be placed in quotation marks¹: "LaTeX".

¹This is just an example of a footnote.

This is a faster alternative: "LaTeX".

Enumerations with bullet points are created as follows:

- first bullet point
- second bullet point
- third bullet point

2.1 Inserting formulas

The setting of a formula or a mathematical symbol, for example, to explain the formula within a continuous text, is done by adding dollar signs. If, for example, the formula $a + b = c$ is to be explained, the individual letters can be set "mathematically" by using dollar signs. This then looks as follows: $a...b....c...$

If the formula has a large contentual meaning, it can be displayed separated from the text.

$$a + b = c \tag{2.1}$$

Equation (2.1) describes...

$$A_{m,n} = \begin{pmatrix} a & b & c \\ d & e & f \\ g & h & i \end{pmatrix} \tag{2.2}$$

In matrix (2.2) is...

2.2 Abbreviations

The abbreviations were defined in the list of abbreviations. If abbreviations are now to be used in the continuous text, the command "Backslash ac curly bracket" is used. The central advantage here is that a new abbreviation is introduced in long and short form, and subsequently only the short form is used.

Here is an example:

The Gross Domestic Product (GDP) is given in Billions (bn.) euros.

If these abbreviations are used again, only the short form is compiled.

The GDP is given in bn. euros.

2.3 Citation

Citations are entered as follows:
