1. Introduction (8% ~ 8,000 characters)

immigration, no other word has raised nowadays, so different opinions in our society, one side with have people, who move from poor region because of wars or looking for better live conditions, to the other peaceful region and rather economic stable, many country in Europe and in America are very concerned by the phenomenon, and on the other side with people, who prepare themselves to the realities that those human moves are, because immigration means in destination country more heterogenisation of the population raising concern about identity, also it human beings to care of, by investing more in security and infrastructure to receive and may be enable them to have an economic contribution.

so political speeches that, address immigration go through the meanings that it represents, to take decisions that, would end with a restriction of migration or of fostering.

there is one thing that plays in favor of migration, is the fact that in developed country, willing to maintain an economic growth the birth rate have never been low as today, and it represents it is small young population and small workforce against a needing older population.

so the speeches of politicians of each countries aware of that fact, can seem favorable or unfavorable to welcome migrant, regarding their economic challenges. so the tone of politicians regarding the immigration can serve as thermometer of how well the country economic is and how it could be in the future. a direct example of that is the USA political discourse about immigration, from a welcoming tone over the 1980s, representing a growing economics to a more restrictive nowadays representing a more difficult economic climate.

so the question that is going to be investigated is: what the political tone about immigration reveals on economical health of the country? Germany is a particular well case to study that question, first by her low becoming birth rate, her economic situation, her aging population, and her work force need.

this study is divided as followed, in the first part it goes through recent study and the findings that justified this one, in a second part it introduces the used data, in the part three presents the study methodology, in part five is going through the empirical

results, in part sixth is where the results are discuss before the studie finish at part seven with a conclusion.

2. Theoretical Background and Literature Review (18% ~ 18,000 characters)

3. Data (10% ~ 10,000 characters)

3.1. Parliamentary Speeches: The Open Discourse Dataset

3.2. Immigration Inflows

3.3. Macroeconomic Variables

3.4. Descriptive Statistics and Preliminary Analysis

4. Methodology (22% ~ 22,000 characters)

4.1. Construction of the Parliamentary Sentiment Indicator

4.1.1. Sentiment Scoring

4.1.2. Validation of the Sentiment Indicator

4.2. The Vector Autoregression Framework

4.2.1. Model Specification and Variable System

4.2.2. Stationarity Analysis

4.2.3. Impulse Response Functions and Forecast Error Variance Decomposition

5. Empirical Results (25% ~ 25,000 characters)

5.1. The Parliamentary Immigration Sentiment Indicator

5.2. Stationarity and Cointegration Results

5.3. Impulse Response Analysis

5.4. Forecast Error Variance Decomposition

5.5. Episode Comparison: 2015 vs 2022

5.6. Robustness Checks

6. Discussion (10% ~ 10,000 characters)

6.1. Interpretation of Main Findings

6.2. The 2015 vs 2022 Comparison: What Differs and Why

6.3. The Role of Political Discourse

6.4. Limitations and Avenues for Future Research

7. Conclusion (7% ~ 7,000 characters)

A. Seed Words for Dictionary Construction

B. Full Dictionary Listings

C. Unit Root and Cointegration Tables

D. Additional Impulse Response Figures

E. Party-Level Sentiment Statistics
